

Table name:

Options

☒ Definition and data

☐ Definition

☐ As table view

☐ Append data

☒ Use first line as column names

☐ Create new field as primary key

Name:

Existing data fields can be set as primary key on the type formatting step (third page) of the wizard.

Definition and data is default when tryin to paste data from Calc to a database.

☐ Definition and data

☒ Definition

☐ As table view

☐ Append data

☒ Use first line as column names

☐ Create new field as primary key

Name:

Existing data fields can be set as primary key on the type formatting step (third page) of the wizard.

Changing to "Definition" disables the button "Next".
First bug – definition could be changed on third page of wizard, but isn't available any more.
