

This is what I want to do:

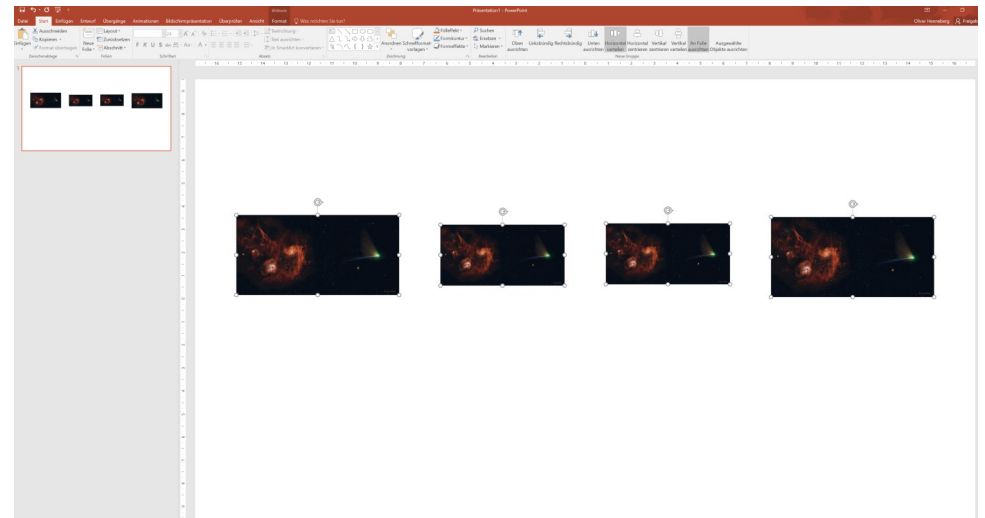

Arrange some pictures

first way is to do it relative to the selected pictures (equal spacing)

or, what i do mostly arrange it relative to page

The function which I use is alwas "distribute horizontally" (Horizontal verteilen) once with selected "arrange selected objects" (Ausgewählte Objekte ausrichten)

the second time I used "distribute horizontally" (Horizontal verteilen) with selecte "arrange relative to slide" (An Folie ausrichten).

For me this function is very helpful. I implemented it specially into my menue, because I use it so often! I encourage the students to use libreoffice, but without this functionality I would not like to switch, and I have hundreds of powerpoints...

Thanks for working on this feature!

Oliver
