

Dialogs don't show the whole content

The following screenshots (in German language) were made with
Linux fangorn 3.12-1-amd64 #1 SMP Debian 3.12.6-1 (2013-12-21) x86_64 GNU/Linux, GNOME Shell 3.8.4, LibreOffice 4.1.4.2 410m0(Build:2)
The user couldn't find a possibility to connect to an external database. It should be seen as the first option – but there isn't enough free space for it.

The following screenshots show the same problem with another dialog. Sometimes it could be a solution to scale the GUI to 80% or 130%. This example shows the whole content only with scaling 130%.
